                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (e.g. thrombotic occlusion of the coronary arteries), haemorrhagic disorders, coronary artery and cerebral artery diseases (e.g. stroke and ischaemia), cardiovascular diseases (e.g. atherosclerosis and myocardial infarction), immunological diseases (e.g. platelet disorder) and embryonic liver disorders. Preferably they are used to prevent acture cardiac ischaemia following angioplasty and metastatic cancers, especially of the colon and liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                glycoprotein VI, and its me and diagnosing hemorrhagic immunological disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ribozymes and antibodies, are useful for preventing, treating and diagnosing disorders associated with aberrant expression or activity of GPVI. These disorders include bleeding disorders (e.g. thrombocytopaenia), blood vessel injury, thrombotic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is nucleic acid molecule en glycoprotein VI (GPVI),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New genes encoding human platelet-expressed collagen receptor, glycoprotein VI, and its modulators, useful for preventing, trand diagnosing hemorrhagic disorders, thrombotic diseases and
                                                                                                                 09-APR-2001; 2001US-0829495.

CC Collagen or platelet release and aggregation blocker. The antibodies of the invention are useful for modulating proliferation, migration. CC morphology, differentiation and/or function of megakaryocytes and CC platelets, including during development e.g. embryogenesis, modulating CC leukocyte-platelet and platelet-endothelium interactions in CC inflammation and/or thrombosis, and modulating platelet aggregation and CC with abnormal or aberrant megakaryocyte and/or platelet aggregation and CC with abnormal or aberrant megakaryocyte and/or platelet proliferation, CC migration, morphology, differentiation and/or function, e.g. bleeding CC disorders such as thrombocytopaenia. Other diseases which may be CC modulated by these antibodies are thrombotic disorders, cerebral CC vascular diseases (e.g. stroke and ischaemia) venous thromboembolism CC diseases (e.g. diseases involving leg swelling, pain and ulceration, pulmonary embolism, etc); coronary diseases (e.g. cardiovascular CC diseases including angina pectoris, myocardial infarction, coronary CC restenssis, atherosclerosis, etc); immunological disorders, cerebral CC developmental disorders, embryonic disorders, liver disorders, cerebral CC vascular diseases, venous thromboembolism disease, coronary diseases, cardiovascular CC restensies in platelet counts, platelet aggregation, and/or platelet activation and so have some advantages over prior art comethods. The present sequence represents a peptide sequence used to CC generate the antibodies of the invention. variable heavy (VH) complementarity determining region (CDR)1, VH CD or VH CDR3, or variable light (VL) CDR1, VL CDR2 or VL CDR3, and immunospecifically binding to a TANGO 268 (also referred as glycopro VI (GPVI)) antigen. The antibodies of the invention act to decrease block TANGO 268 binding to extracellular matrix components, or as a collection of the components of t This invention relates to a novel purified antibody comprising a variable heavy (VH) complementarity determining region (CDR)1, VI or VH CDR3; or variable light (VL) CDR1, VL CDR2 or VL CDR3, and generate the antibodies of the invention. as glycoprotein CDR2 ö

                                                                                                                                                                                                                                                                                                                                                                  order to produce a humanised rodent Ab can be determined by calculating homology between murine and human Ab antibody surfaces. In order to test the resurfacing approach of the invention, three humanisation experiments were set up: (1) traditional loop grafting; (2) resurfacing approach using most similar chain; and (3) resurfacing approach using human sequences with most similar surface residues. The Ab used was the murine anti-N901 Ab (see AARS2061). Experiment 3 was carried out using the present sequence which represents the human PLO123 Ab light chain variable region with 74 percent homology with anti-N901 Ab. N901/PL0123 (AARS2067) was prepd. by resurfacing. Sequence numbering starts at possition 118 in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Method of resurfacing of rodent antibodies to produce humanised antibody forms - for producing non-human antibodies with improved therapeutic efficiency by presenting human surface on V-region

cc interleukin-12 (IL-12). The invention also includes antigen binding CC portions that bind to IL-12. Sequences AAB39485-B39516 represent human CC anti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region CC given in AAB39517-B39560 and AAB40068-B40149. Sequences are CC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39772-B40063 represent anti-IL-12 CDR3 related amino acid sequences, AAB39772-B40063 crepresent other CDR sequences. Light chain CDR3 consensus sequences are CC given in AAB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in CC AAC61062-C61071. The antibody of the invention are given in CC antibody and has antirheumatic; antiarthritic; antisclerotic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. CC antihodises or antigen-binding fragments are useful in the treatment CC of disorders associated with detrimental release of human IL-12. CC They can also be used in the manufacture of a pharmaceutical composition CC to treat human IL-12 disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 6

CC This invention relates to a new human antibody specific for human CC interleukin-12 (IL-12). The invention also includes antigen binding CC portions that bind to IL-12. Sequences AAB39485-B39516 represent human CC anti-IL-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences. Other variable region includes variable region CC amino acid sequences. Other variable region amino acid sequences are CC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39771 CC represent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in AAB40064-B40067. Primers used in the identification and CC AAC61062-C61071. The antibodies of the invention is a neutralising CC antibody and has antirheumatic; antispartatic; antiacthratic; antischerotic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. CC The antibodies or antigen-binding fragments are useful in the treatment of disorders associated with detrimental release of human IL-12, CC They can also be used in the manufacture of a pharmaceutical composition to treat human IL-12 disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc important in physiological phenomena such as cell rolling, metastasis and clinflammation, where the epitope is capable of being bound by an antibody, cc its antigen-binding fragment or its complex comprising at least one can thoody or its binding fragment having a first hypervariable region. The clinguishes are useful for inhibiting cell rolling, inflammation, autoimmune cdisease, thrombosis, restenosis, metastasis, growth and/or replication of tumour or leukaemia cells, increase in number of tumour or leukaemia cells, increase in number of tumour or leukaemia cells in a patient, cell-cell-matrix, platelet-matrix, platelet-matrix, for increasing mortality of tumour or leukaemia cells, for increasing the concerce conceasing mortality of tumour or leukaemia cells, for increasing the cor anti-leukaemia agents, or for decreasing the number of tumour or leukaemia cells in a patient, or for decreasing the number of diseases, anti-cancer cor the above mentioned purposes. The epitopes are useful for diseases, conformations of inflammatory diseases such as cancer, leukaemia, autoimmune diseases, conformations and diseases such as myocardial cor inflammatory control diseases caused by sulphated tyrosine-dependent cor protein-protein interactions. This sequence represents a human antibody control of the inventions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a peptide or polypeptide comprising an Fv molecule, a construct or fragments or a construct of a fragment with enhanced binding characteristics which selectively and/or specifically binds to a target cell in favour of other cells, where binding is primarily determined by a first hypervariable region and Fv is a single chain Fv (scFv) or a disulfide Fv (dsFv). The peptide, optionally in association with or attached, coupled, combined, linked or fused to a pharmaceutical agent, is useful in the manufacture of a medicament, where the medicament has activity against a diseased cell, preferably a cancer cell (selected from carcinoma, sarcoma, leukaemia, adenoma, lymphoma, myeloma, blastoma, seminoma, and melanoma, where the leukaemia cell is an acute myeloid leukaemia cell). The peptide is also useful for preparing a composition for use in inhibiting the growth of a diseased or cancer cell. This sequence represents a human Fv molecule hypervariable region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hagai Y, 1
Plaksin D,
DNA fragment comprising human immunoglobulin Vh production of human immunoglobulin in mammalian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel peptide/polypeptide for cancer therapy has Fv molecule, construct or fragment, or construct of fragment with enhanced binding characteristics so as to selectively bind target cell in favour of other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC chain sequences encoded by novel isolated genes. The genes CC (AAQ78939-79002) were isolated and cloned from a series of cosmid CC constructs: Y202; Y103; Y21; Y6;Y24; 3-31; M84; M118 and M131, by PCR CC amplification using primers AAQ78917-38. The genes are subdivided into 5 (amplification using primers AAQ78917-38. The genes are subdivided into 5 (amplification using primers AAQ78917-38. The genes are subdivided into 5 (c) families of Vn genes. The fragments cover a region of 800 kb. The DNA CC fragments were isolated from high molecular weight DNA from human cc placenta. The DNA was partially digested with TaqI restriction enzyme. CC were collected. The fragments were ligated with ClaI-digested cosmid CC were collected. The fragments were ligated with ClaI-digested cosmid CC vector pJB81. The ligation products were in vitro packed and infected CC into E.coli 490A. The fragments were then subcloned by colony CC useful in producing human immunoglobulin in mammalian hosts.

The present sequence relates to novel antibodies which are capable of CC binding to the subdomains Map10 protein, a surface localised protein CC prom Staphylococcus aureus. Sequences of the invention prevent S. aureus infection in a human or animal and inhibit binding of staphylococcal bacteria to eukaryotic cells. They are also useful for diagnosing an CC infection of S. aureus in a sample and for treating or preventing S. aureus in a sample and for treating or preventing S. aureus in fection in humans or animals. Antibodies of the invention are useful CC identifying antibodies to the Map10 protein in a sample. They are also CC useful in preventing adherence of Staphylococcal bacteria, in production CC facilities or laboratories to isolate additional quantities of the CC proteins, such as by affinity chromatography and in the development of CC vaccines for passive immunisation against staphylococcal infections. The contents for passive immunisation against staphylococcal infections. The contents of the make them safer to use, including sutures, replacement heart colves to make them safer to use, including sutures, replacement heart valves, cardiac assist devices, hard and soft contact lenses, intraocular regions implants, other implants such as corneal inlays, kerato-prostheses, cardiac stents, dental prostheses, pacemakers and heart valves. The present sequence is a DNA encoding Staphylococcus aureus Map10 antibody in the protein in the sequence is a DNA encoding Staphylococcus aureus Map10 antibody in the protein in the sequence is a DNA encoding Staphylococcus aureus Map10 antibody

Novel human monoclonal antibody immunoreactive with human immunodeficiency virus-1 glycoprotein gp120, useful for detecting in biological sample and providing passive immunotherapy to HIV-1 infected mammal HIV-1

Claim 1; Page 70; 81pp; English.

The present invention provides the protein and variable regions of human monoclonal antibodies coding s which sequences for the are immunoreactive

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences for the variable regions of human monoclonal antibodies which are immunoreactive with human immunodeficiency virus-1 (HIV-1) envelope glycoprotein gp120. These can be used in diagnosis and therapy of HIV-1 infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human monoclonal antibody immunoreactive with human immunodeficiency virus-1 glycoprotein gp120, useful for detecting in biological sample and providing passive immunotherapy to HIV-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell tumour necrosis factor (TNP) super family and induces B cell crown and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and ciseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (TUD) and acquired immunodeficiency syndrome (ALDS)). ABP43990-ABP4728 represent the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                              This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and disease.
                                                                                                                                                                                 diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (cVID) and immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             16-MAR-2001; 2001US-276248P.
